## Product Description

TradeMessenger

## Product Description

It is mainly used to process charcoal powder into cylinder shape briquette with high density and standard looks, and marked with a number of holes inside the cylinder makes it seems like honeycomb, because it can increase the surface area of coal. make the full combustion of coal, to reduce resource waste. Also our briquette machine now widely used to produce new-type ignited briquette.

### Shapes:

Circle, quadrilateral, hexagon, etc. Or we can customize related molds according to

customer requirements.

### Working principle:

The motor drives the motor wheel and the turntable to rotate. The stamping rods work up and down to press the coal into briquette through the mold, and then convey it through the conveyor belt. The scraper conveys the excess debris to the back of the machine body through the return conveyor belt for feeding.

### Structure:

Our honeycomb briquette machine is divided into five parts: main body, transmission part, feeding part, punching part, and transport part. And every part works together in order to provide a stable and reliable performance.
